

DATA ANALYTICS REVIEW

We make technology work for you

Expand - IT can create applications that are visualisations of any kind of education data that you can then interrogate and analyse. Our Specialist Consultant can work with you to understand your requirements and then design and build the visual intelligent data solutions.

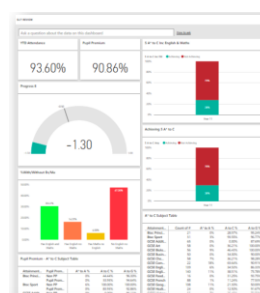

We Provide:

- **A pre visit conversation** to establish needs and obtain key information.
- **A number of school visits** to engage with staff to discuss with you your exact needs; review current data and advise on its strengths and weaknesses and how it can be improved; discuss your data visualisation requirements, the design of the reports, who is to access them and how; the sources of data, the relationships between the different sets of data you want to use and how often it should be refreshed.
- **Access to the Expand-IT Technical team** to build the intelligent data solution and share it with you.
- **Training** for you to get the best out of the bespoke data visualisation tools.

Benefits of Data Analytics include:

- Making sense of all that data, by bringing it together in one place;
- Interrogating the data using natural language search terms;
- Sharing your findings in the form of interactive reports and dashboards;
- Refreshing the data at a time that suits you;
- Making timely interventions;
- Making more informative decisions;
- Having a greater understanding of Achievements, Progression, Costs and Impacts;
- Being more efficient and make more efficiencies.

Note: The consultant and Expand - IT provide an annual Technical and Development Support Service.
